SPA Intake

EPIC: Single Page Application (SPA) Intake for [Application Name]

Ticket ID: #12345

Overview

This is the master ticket for the intake process of the [Application Name] as a Single Page Application (SPA). It encompasses all the necessary steps required for successful design, feasibility analysis, and initial application setup.

Details

Proposed URL for the Project: [Fill in domain]

Requires Authentication: [Yes/No]

Data Storage: [None/Client/Server]

Checklist

- [ ] **Kick Off Meeting**: Conduct a kick off meeting involving representatives from Product Lines, UX Team, Frontend Developers, and Backend Developers to align on objectives and expectations.
- [ ] **Design & Requirements**: Gather and document the design and functional requirements for the SPA.
- [ ] **Technical Feasibility**: Conduct a technical feasibility study based on the gathered design and requirements.
- [ ] **Design Iteration**: Follow-up on the design after the technical feasibility study, making necessary iterations and adjustments.
- [ ] **Basic Application - Data & API**: Define and set up the data structure and API calls for the basic application.
- [ ] **Basic Application - Page Construction, Code Branch, Page Access**: Construct the basic page layout, create the relevant code branch, and set up page access.

- [ ] **Basic Application - Vue APP SHELL**: Set up the Vue APP SHELL for the basic application.
- [ ] **Basic Application - Application Initiation**: Initiate the basic application with basic features and layout.
- [ ] **Component Construction**: Create multiple tickets for each component that needs to be developed or modified.
- [ ] **Application Specifics - Feature X scaffolding**: Create multiple tickets for each application-specific feature that needs to be scaffolded.
- [ ] **Application Integration with Components - Feature X Refinement with QA**: Create multiple tickets for refinement and QA of each integrated feature.

This checklist provides a high-level overview of the steps that need to be taken. Detailed sub-tickets should be created under this main ticket to track the progress of each individual item. This way, it'll be easier to manage and track the progress of the application's transition to a SPA.

Please fill in the details accordingly, which will greatly assist the development team in understanding and executing the required tasks.
